2022 - Hospital Smart Service Grading Evaluation — Project Manager
Computer Center, Tongji Hospital of Huazhong University of Science and Technology

Interpreting the evaluation standards and leading the technical team to improve the hospital information systems to meet the high rating standards.

2021 - Standardized Maturity Evaluation of Hospital Information Interconnection — Backend Developer
Institute of Information Medicine, Huazhong University of Science and Technology

Refactoring the backend code (based on Spring + Hibernate) of China National Health Commission's platform for Standardized Maturity Evaluation of Hospital Information Interconnection, which is an evaluation tool for inter-hospital communication.

2020 - Evaluation of Application of Electronic Medical Record System — Project Manager
Computer Center, Tongji Hospital of Huazhong University of Science and Technology

Interpreting the evaluation standards and leading the technical team to improve the electronic medical record system to meet the high level requirements.

2015 - "Baidu Unlimited" Information Search Competition Website — Backend Developer
"Baidu Unlimited" National University Information Search Competition

Building an online test system which randomly picks questions from the question bank provided by Baidu.

2014~2015 - Evaluation System for Undergraduate Teaching Work — Backend Developer
Wuhan University

The system's purpose is to display and manage the evaluation information of the university's undergraduate teaching work (course opening, land use, graduate employment, etc.), and generate evaluation reports for the Ministry of Education to assess the teaching work of Wuhan University.

2010 National College English Contest Second Prize

2013 - Hospital Wireless Calling System — Backend
Developer
Shiyan Taihe Hospital

Developing a calling system with one PC host and many Android terminals. The host can manage hospital information and receive terminal requests. Patients can query hospital information through the Android tablet terminal and call the duty room phone or the duty staff's Android phone. Hospitals can push reminders and promotional messages to patients in multimedia format.
